

Bridge Builders – The Benchmark in Timber Bridge Construction

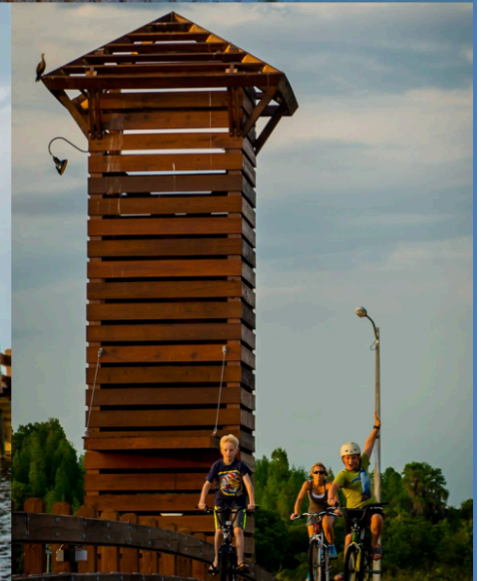

Union Park - Creating a stunning access point using timber bridges and tower by Bridge Builders USA, Inc.

Union Park is an upscale housing development located in Pasco County, FL. Developers within the project market the community as, “A peaceful nature retreat without leaving home” and an opportunity to “Connect to nature, technology, family and fun.” Upon arriving residents are greeted by a pair of stunning arched vehicular bridges and an attractive tower entrance – all designed and installed by Bridge Builders USA, Inc.

The entrance and exit bridges have dramatic arches which reach a height of 25’ from lake bottom at the center of both bridges. The arches create a unique vantage point overlooking the lake and community for residents and visitors. Both vehicular bridges are built to HS20-44 highway standards, and support both residential and construction activities. The bridges and tower are not only the primary access to the community but are also seen as an amenity for homeowners that creates a memorable landmark for Union Park and the extended area.

This design/build concept of function and form has been so well received by that it is being replicated by Bridge Builders for our client Metro Development on a similar community, Northbrook in Ft. Myers, FL.

Union Park – yet another example of Bridge Builders proven “Concept to Completion” method which has delivered quality and value to our clients for over 35 years.
